

# LED Control

## CLED Series LED Light Controller

The CLED light controller uses multi-function DMX control interface cards capable of independently controlling up to fifteen Lumen Series light fixtures. This Controller can be used as a stand-alone unit to run "limited" lighting shows by manually selecting the modes with the built-in selector switches. These on-board controls provide for simple color fades, strobe effects, and color chases between fixtures. The Controller may also be interfaced with a DMX console or PC based controller to provide virtually limitless control of the lights, producing "real-time" shows as directed by one of these systems.

Our controller cards accept the DMX-512 protocol widely used in the entertainment industry.

*Fountain People, Inc. offer full programming service.*

*Contact us at (512)392-1155 or [design@fountainpeople.com](mailto:design@fountainpeople.com) with your specific requirements.*

**DMX Interface:** DMX-512 control with multiple channel modes - Color Palette, Red Intensity, Green Intensity, Blue Intensity, Master Intensity, and Strobing.

**Power Input:** 120VAC.

**Power Connections:** Plug-in screw pin headers (furnished).

**Safety:** Underwriters Laboratories Listed.

Model Number	Number of Fixtures	Max. Wattage Output
CLED-5	5	108
CLED-10	10	216
CLED-15	15	324
